

Individual reflection week 4

Isabelle Ermeryd Tankred

April 2019

What do I want to learn and understand better?

I believe I've gotten a better understanding of react this last week. I still struggle sometimes but I really like how react works and it's usually pretty easy to find out where you've done wrong. However I'm still not comfortable with using git. When everything works as it should, it's fine but whenever there's some error I'm lost and I struggle a lot with the terminal. i believe that I will get a better understanding of git by exploring and playing around with the terminal.

How can I help someone else, or the entire team, to learn something new?

I'm very interested in the design perspective of coding and I like to explore css and html which I believe can be in favor for someone else in this project.

What is my contribution towards the team's use of Scrum?

Whenever we've been coding I've looked at the user-story to check weather we're going in the right the direction and I try to evaluate if we deliver what the consumer actually wish for.

What is my contribution towards the team's deliveries?

Together with my smaller group, we've made a create account page. It went pretty smooth, I've got a better understanding of react and everything is easier now compared too the first weeks. I also helped writing this weeks retrospective.
