

# Weekly report, Sara Hillström

Sara Hillström

Week 4, April 2019

## **1 What do I want to learn or understand better?**

During the next sprint I want to learn more about integrating different functions of our web-platform, since I think that making the integration actually work is a tricky part of the process. Other than that I want to get better at detecting and solving defects in the code.

I believe that I have gotten better at programming in React, and I look forward to get even better during the next sprint. To accomplish this I will try to look at the code that the other development teams has written and try to understand what the different parts of the code do. In addition to this I will continue to work with my development team and grow by discussing and writing code together.

## **2 How can I help someone else, or the entire team, to learn something new?**

I can help the others in my team learn something new by always applying a business sight to our code and scope, giving our project a greater depth. Other than that I can help the others gain a better structure during meetings as well as when developing the actual code.

## **3 What is my contribution towards the team's use of Scrum?**

I still believe that my agile way of working and thinking and my structured personality is a contribution to the teams use of Scrum. I try to continuously look at our Scrum board and make sure that it is up to date, and as a PO of some user stories I think that I, with my industrial engineering and management studies, am able to spot what is of business value and what doesn't meet up with the requirements.

## **4 What is my contribution towards the team's deliveries?**

During this sprint I have analyzed and summarized the data received from our interviews with potential producers and customers. By doing this I was able to sharpen our scope and give our web-platform a greater customer value.

Other than that I have contributed to my development team and our user story in developing the basic 'create account page' together with the rest of my team. During the break and re-exam period I was able to gain a better understanding of React and CSS by watching different tutorials, which I really felt made a difference in my contribution to the code and our discussions.
