

Sprint retrospective week 7

Ellen Widerstrand, Henrik Lagergren, Isabelle Ermeryd Tankred,
Louise Larsson, Nils-Martin Robeling, Oscar Orava Kilberg, Sara
Hillström

May 9th 2019

1 What went well in this sprint?

During this sprint we have finished the user stories needed to create a functioning flow for both the customer and the producer. We were able to do this by narrowing down our user stories and more clearly defining the required tasks. One example of this was our login component which we simplified so that we could spend more time on more valuable stories.

2 What could be improved?

We could spend less time on stories that don't deliver as much value and re prioritize accordingly. As always, since React is a new programming language for us, we could get even better at creating code in React.

3 What will we commit to improve the next sprint?

During the next and final sprint before code hand in and presentation we will commit to improve the overall design of the code. We will also try to simplify the requirements of the remaining user stories so that we can focus on the most value creating parts.
