

Weekly report, Sara Hillström

Sara Hillström

Week 7, May 2019

What do I want to learn or understand better?

During our last sprint we will work on our presentation. I would like to learn more about how to in the best way possible demonstrate our code and show the most valuable parts of it during the presentation. Other than this I would like to, as previously mentioned, learn React even better, although I am satisfied with my development so far.

How can I help someone else, or the entire team, to learn something new?

I hope and believe that I can help the rest of the team to learn more about presentation skills. During my three years at Industrial Engineering and Management I have had a lot of presentations and lectures about how to present and capture the interest of an audience. Other than that I think that I will be an asset in focusing the presentation and its argumentation to the business value of our development.

What is my contribution towards the team's use of Scrum?

I've contributed to the Scrum use by taking part of dicussions, using the Trello Scrum board and being a product owner and critically reviewing the user stories based on its acceptance criterias.

This week I was the meeting administrator as well as overall Scrum master, which has made my contribution to our Scrum use even greater than in previous sprints. I have done this by e.g. making sure that we get through with our daily scrums and this sprints retrospective.

What is my contribution towards the team's deliveries?

During this sprint I have been a part of developing the code needed for the producer inventory page as well as the connection from this to the products displayed for the consumers. By doing this together with my team I have been able to contribute to our deliveries by being a part of developing our main value; a working flow for both the producers and the consumers.
