

Weekly report, Sara Hillström

Sara Hillström

Week 4, April 2019

1 What do I want to learn or understand better?

Until next week I want to get a deeper understanding of React. I will try to achieve this by watching tutorials in parallel with coding. Since it is Easter this weekend and since it is a re-exam period in the next week we won't work in the same pace as during normal sprints. This makes it possible for me to really sharpen my React skills individually, and by that being able to contribute even more to my development team in the continuation. Other than that I am looking forward to learn more about working with Scrum and see the value in working agile in an IT-project.

2 How can I help someone else, or the entire team, to learn something new?

I can help the others in my team to learn something new by learning more about React during the holiday and (hopefully) being able to give some new insights about the language to the rest of the team.

In general I think that my openness towards learning new things and my team working mentality will help towards making the whole team try and learn new things throughout the project.

3 What is my contribution towards the team's use of Scrum?

This sprint I have been able to provide structure and a greater implementation of Scrum by suggesting that we should start with 'Daily Scrums', 'Sprint retrospective' and that we should choose a Scrum master for each sprint. I have read and watch several Scrum information texts and books and I think that I have gotten a good understanding of why, how and when we should implement Scrum. During our Daily Scrums and Sprint Retrospective I have contributed to the discussion that has taken place.

4 What is my contribution towards the team's deliveries?

During this sprint I have gotten a basic understanding of developing in React. Because of this I have been able to make a contribution developing the code necessary for my teams user story (together with the rest of the team of course). I think that overall I contribute to the team by having a good understanding of how to implement an agile way of working (by suggesting a more rigorous Scrum application), and my structured way of thinking and working has helped our time management during and in between meetings.
