

Individual reflection

Henrik Lagergren

Week 6, May 2019

What do I want to learn or understand better?

I have improved my skills in React, but it is not enough so like all other weeks I want to learn more about React. I also want to get a better understanding about how to navigate between different components in React.

How can I help someone else, or the entire team, to learn something new?

I still think that I can learn help others with code related problems and Github. I will, as always, continues to give my opinion on different talking points, which hopefully help the team forward.

What is my contribution towards the team's use of Scrum?

I have continuously looked into the sprint backlog and worked against user stories. In contrast to last week did we reach the weekly sprint goal this week. During this sprint I have showed the progress to all other team members, and vice versa. I think this week was one of our best, where we have added a lot of value to our project.t. I also try to contribute in our daily scrums.

What is my contribution towards the team's deliveries?

Since I together with my coding partner did not finish our user story last week we finished it the first half of this sprint. During the other half we continued to work with the resultpage. We have added different filters for the user to filter only relevant search results. Example on filters is categories, rating and distance. The page has also a searchbox where the user can search for specific farms. We have also implemented a shopping cart, making it possible for a user to add products in a cart.
