

# Individual reflection

Henrik Lagergren

Week 1, March 2019

## **What do I want to learn or understand better?**

I want to improve my knowledge about how to create a solid model in a new programming project. I also want to learn and understand javascript, which is mainly used to develop web-applications.

## **How can I help someone else, or the entire team, to learn something new?**

I can help the team with their skills within version control since it's a prerequisite to understand version control in a group programming project. I can also help others to solve coding problems. I will always try to be as active as possible to help our team to get forward.

## **What is my contribution towards the team's use of Scrum?**

Since I've been away this week I missed the lego exercise and therefore can't answer this question right now. I will talk to the team on monday.

## **What is my contribution towards the team's deliveries?**

Even though I was away I've tried my best to contribute. I came up with several ideas about that we're going to code and sent an old social contract from another course to give some inspiration.
