

Individual reflection

Henrik Lagergren

Week 8, May 2019

What do I want to learn or understand better?

Like all other weeks I want to improve my skills within React and learn how to debug React-code. I also want to get a better understanding how to style javascript-code with CSS and learn how to reuse the style components.

How can I help someone else, or the entire team, to learn something new?

I will as always help other team members with their github, git and different code-problems. I try to help in a way that is easy to understand and reflect over. I will also give my opinion on different talking points and design choices.

What is my contribution towards the team's use of Scrum?

I have been active in all discussions in our weekly meetings. I have also always tried to give as much feedback as possible on new functionality, even though I was not the product owner. I have been updating the product backlog so it is up-to-date. Since this is one of the last sprints I have focused more than normally on bringing value to the project.

What is my contribution towards the team's deliveries?

This week a big focus has been on to do hotfixes and style the project. I have fixed several bugs in the code and made some code clean-ups. I did for example a code clean-up to remove all warnings we had in the project. I have also integrated the login component and functionality that made it possible to login as a producer.
