What do i want to learn and understand better?

I wish to learn more about how to prevent merge conflicts caused by packages and node modules. Furthermore i would like to learn more about agile product development.

How can i help someone else, or the entire team, to learn something new?

I'm helping my team mate with her code as well as the entire team to try and merge, not going very well at the moment, but we're trying our best. I don't really know what i can help the others learn at the moment more than the tools i have used to develop my checkout wizard.

What is my contribution towards the team's use of Scrum?

Keeping the deadlines, being active in discussions, helping as a product owner and also keeping in touch with my product owner.

What is my contribution towards the team's deliveries?

This sprint i wrote a checkout wizard and helped with a login client. Also general structure of the pages and all-round work.
