

Individual reflection

Ellen Widerstrand

Week 6, May 2019

What do I want to learn or understand better?

Like previous weeks, I want to improve my knowledge about React JS. I especially want to learn more about how one uses packages. I started to use some packages this week, but I want to get a better understanding of how it works. I think that it can be very time saving to use packages, which will make it easier to estimate effort for specific tasks, which is something I also want to improve.

How can I help someone else, or the entire team, to learn something new?

Everyone hasn't got a grip of GitHub yet, which is something I think I can help with. I have used GitHub in several courses before and I would love to share what I have learnt. I also think that I can help by reminding the others about commenting and also help them with structuring their comments.

What is my contribution towards the team's use of Scrum?

I have worked closely with our sprint backlog this week and I have also tried to follow the others work better, so that I have a better understanding of what they are developing. I was the product owner for a user story this week, and gave some comments about what needed to be changed before the story was approved. I have also been the Scrum master this week and have therefore tried to ensure that the team follows the procedure that we have agreed we will use.

What is my contribution towards the team's deliveries?

My coding partner and I didn't finish our user story last week, so we completed it this week instead. This for example included adding a search box, where a consumer can search for a specific farm. We also started making filtering options. We added filtering for which type of products a farmer sells and also for their rating.

I have, like all other weeks, also contributed in the team reflection. I have also tried to help with more general coding problems that we have had.
