What do i want to learn and understand better?

I want to learn and dive more into agile software development and management, would be nice to get more of a foundation than i currently have and have gotten from the course.

How can i help someone else, or the entire team, to learn something new?

I can help the entire team by helping out with the last of the hand-in paper as well as doing work on the presentation. To learn something new is hard, but i hope to be able to contribute with my language skills and rhetorical knowledge in the presentation and paper.

What is my contribution towards the team's use of Scrum?

Helping with hand-ins, always keeping an open dialogue and being active during the sprint.

What is my contribution towards the team's deliveries?

Some styling, a lot of code comments, testing, bugfixing and writing on the different deliverables.
