

# Individual reflection

Ellen Widerstrand

Week 8, May 2019

## **What do I want to learn or understand better?**

I still want to learn more about ReactJS. I feel like I have learnt a lot about it during these weeks, but I still have a lot left to learn. I would like to learn more about how the use of different tags effect the layout. I would also like to learn more about how to pass functions as props.

## **How can I help someone else, or the entire team, to learn something new?**

Since I have worked a lot with CSS during this project, I think that I can learn the other team members some tips and tricks. I can also help with problems regarding git. Most of the team members are quite comfortable with git now, but questions arise when it complains about more rare things or when they try to do new thing (i.e. merge).

## **What is my contribution towards the team's use of Scrum?**

I have, like always, actively participated in the meetings as well as the group discussions. I have also tried to focus on the most important parts, to create as much value as possible. We have ignored styling the previous weeks, but that was something that created more value this week since it made the GUI easier to understand as well as making it look more ready for delivery.

## **What is my contribution towards the team's deliveries?**

I have worked a lot with CSS this week, styling the wizard for the checkout as well as the producer page. I have styled smaller things in the other pages as well. I have also cleaned the code and removed parts which isn't used. Especially in the CSS-files, there was a lot of classes that wasn't used at all. I have also done some bug fixes, especially regarding the checkout component. The "next" button didn't work as intended and the function for checking if the information was entered correctly didn't work.

I have participated in the making of the team's deliverables this week, but I have not focused on that as much as previous weeks, since my focus has been more on the code. Since this was the last sprint, we wanted to complete as many parts of the website as possible and therefore we divided the work between us so that the ones who are more comfortable with coding focused on that. The others focused more on the deliverables, but everyone helped with everything.
