Individual reflection

Ellen Widerstrand

Week 1, March 2019

What do I want to learn or understand better?

I want to learn how a business model canvas is used. I also want to evolve my skills in programming, especially regarding designing a web- or mobile-application.

How can I help someone else, or the entire team, to learn something new?

I can show the students that have not used GitHub before how to get started, i.e. clone the project and basic commands. I can also help the students who have not yet used Overleaf and show them how that is used. I also think that everyone can learn from each other to evolve our programming skills. We will start by coding in pairs, to help the students who has not written as much code.

What is my contribution towards the team's use of Scrum?

We got to test using Scrum during the Lego exercise on Tuesday. I think we worked well as a team and helped each other with trying to understand how Scrum is used.

What is my contribution towards the team's deliveries?

Everyone in the group participated in the making of the social contract. A git repository has been created by Nils-Martin, which I have cloned.
