# Individual reflection

Ellen Widerstrand

Week 5, May 2019

## What do I want to learn or understand better?

I want to get better at estimating effort for user stories. I find it especially hard to estimate the parts that I do not know how to solve. For example we implemented a scroll pane this week, which turned out to be much harder than expected. I still want to learn more about react and especially get a better understanding of how components can be related to each other, as well as how one can place the components on the screen.

## How can I help someone else, or the entire team, to learn something new?

I have worked quite a lot with CSS and I think that I can learn, especially my coding partner, more about that. I can probably help the other coding groups with some parts of the coding. Everyone has got a better understanding of some parts of react, since we have focused on different parts.

## What is my contribution towards the team's use of Scrum?

This week I have tried to work more with our sprint backlog and focus on getting the most important tasks done first. I also helped evaluating this weeks effort versus velocity. This week we underestimated the effort for several task, which we will take into account for next week's tasks.

## What is my contribution towards the team's deliveries?

My coding partner and I have worked on the page where a customer can browse the farmers. We have added smaller boxes with more compact information, which a user can click on and the get more information about the farmer and his goods. I have created a document where we will get a better overview of our defects and also added some that we have at the moment. This will make it easier to evaluate one of our KPIs. I have also, like the previous weeks, helped with the team reflection.
