Sprint retrospective week 6

Ellen Widerstrand, Henrik Lagergren, Isabelle Ermeryd Tankred,
Louise Larsson, Nils-Martin Robeling, Oscar Orava Kilberg, Sara
Hillström

May 9th 2019

1 What went well in this sprint?

This has been our most productive sprint so far. We have finished most user stories, although some of them turned out to be more complicated than expected. By this point we are very close to having a working channel and flow for the consumer buying products from farmers. Our problem solving has been good much thanks to good collaboration amongst ourselves in working out issues and challenging user stories.

2 What could be improved?

During this sprint we have had a lot of issues regarding the estimation of the effort for different user stories and our velocity. Some of us have taken on more user stories than what was planned before the sprint, and some of us haven't finished the stories expected within the sprint.

3 What will we commit to improve the next sprint?

As in the last sprint we need to get a grip on how to estimate the effort and the velocity. We believe and hope that with every week we gain a better understanding on the React language and the tools used, as well as how to fix common bugs and errors.
