# Individual reflection

Henrik Lagergren

Week 7, May 2019

## What do I want to learn or understand better?

Like all other weeks I want to improve my skills within React and learn how to debug React-code. I also want to get a better understanding about how to merge branches, because of the problems that emerged this sprint.

## How can I help someone else, or the entire team, to learn something new?

I will continue to help other team members with their git and code-problems. I will, as always, continues to give my opinion on different talking points, which hopefully helps the team forward.

## What is my contribution towards the team's use of Scrum?

I have worked against the given user story and updated the sprint backlog. During this sprint I was the product owner for the "checkout"-task, where I gave feedback and my opinions. I have also been active in all discussions. I think that all team members, including myself, created value to the project this week.

## What is my contribution towards the team's deliveries?

I and my coding partner have been working on an auto-complete together with Google Maps, however we did find some problems with the Google API and decided to take another path. Instead we hard-coded and used some pre-filled values. We have also implemented a button that finds the user's current location, and that we later on can match with the closest farmers.
