Sprint retrospective week 5

robeling

May 2nd 2019

1 What went well in this sprint?

Overall it has been smooth despite lack of meetings and some team members on leave. Went very fast to get the visuals on the create account story.

2 What could be improved?

Some communication between members, but this will automatically be better since the ones missing are now back. We could also try to think more and do some research before we estimate how much effort is required for a story, but we weren't far off. Also since this was kind of a "weird" sprint with a break in the middle we have to take that into consideration.

3 What will we commit to improve the next sprint?

Some more focus on the user stories and the importance of estimation, communication and cooperation. We will also try to use our uniform design template better to get a more consistent look.
