Weekly report

Sara Hillström

Week 1, March 2019

1 What do I want to learn or understand better?

I initially want to learn more about the different programs used in the project, since we (in industrial engineering and management) haven't really used anything else than Eclipse and JGrasp in previous courses.

Overall throughout the course I look forward to learning more about different coding methods and how to build a bigger program from scratch. In previous courses I have learned to program small sequences of code from a given task, so it will be fun and rewarding to, with the help and guidance of the IT-students, learn how to apply my programming skills in a greater context.

2 How can I help someone else, or the entire team, to learn something new?

My knowledge within business value and business creation, in this course applied to IT-solutions, is something that I think would be helpful to the team members from the IT-program and in the making of the business model canvas.

3 What is my contribution towards the team's use of Scrum?

So far the only experience I have had with Scrum is this weeks initial lecture and the Lego-exercise, but based on those two I would assume that my contribution to the team using Scrum would be to have a disciplined and structured way of working as well as being able to have a overview of the work.

4 What is my contribution towards the team's deliveries?

This week I made a contribution to the forming of the social contract (with the rest of the group). I also contributed in suggesting that we will have a 2 week planning horizon throughout the project.

Other than that I made suggestions for what our project could be about, keeping in mind what ideas could be of business value and not.
