Indivudual Reflection 8

Louise Larsson

May 2019

What I want to learn and understand better

Since we are done with the sprints for our projects, the things I want to learn are those that could bring value in other situations. I am really happy that I have learned how to set up an environment for the development and realizing that it is not as comlicated as I thought - mostly it just takes a lot of patience before you get the hang of it. So what I want to learn is setting up other development environments, for example for apps.

Also I hope to learn things from the final report where the group will bring together 8 weeks of reflections and gradual imporvements. I think seeing this will bring a lot of insights into the result of using scrum and what parts are important for what reason.

How I can learn someone else something new

When beginning this project I saw myself purely as a I-student with little experience in programming and minimal understanding of how to actually apply what I have learned. Therefore I also saw that the one thing I could learn anyone in my group was things regarding business or similar. Since then, I have shifted perspective and see that I do also have qualities in software development. This means I can now learn someone else (maybe not the ones in my group since they still know more) about the things I needed to learn myself in the beginning. And I can absolutely learn someone about challenges in software development and good methods for handling it.

My contribution towards the teams use of Scrum

I have been meeting administrator this final sprint and have contributed by leading meetings in an effective way so that we can spend our time doing the things that really bring value to our final delivery. I have also taken part in discussions about changes in in open documents.

My contribution towards the final team delivery

My primary contribution this week is a focus on value. This is because we have been short on time, since it is the last sprint, and some parts have been more critical than others for the value of the final project.
