Reflection

Week 8 Nils-Martin Robeling

May 31, 2019

What do i want to learn and understand better?

I feel like I'm at a point where I'm comfortable enough with scrum and react to work with it at a reasonable pace. Still i feel like i have a LOT to learn and would like to dive deeper in to both react and scrum. I would like to see how scrum works in the bigger companies like Volvo and Ericsson. To get there i would have to do some research, maybe send a few emails and watch some tutorials.

How can i help someone else, or the entire team, to learn something new?

At the moment i feel like the team is pretty much on the same level, knowledge-wise, on react and scrum. If i could contribute with something, it would probably be my language-skills for the final report. I could probably also learn them something new React-wise, since we all gained skills in different areas of the language, to do this i could probably bring it up as a discussion subject or send links and maybe videos for those who wanted to learn more.

What is my contribution towards the team's use of Scrum?

By keeping contact within the group and the product owner as well as daily scrums i have helped by keeping the web of scrum together. I have also acted as product owner for a few user stories. Sometime in the future i would like to try being a full-time scrum master or product owner, this could be achieved by attending future project courses or try to get a job where scrum is actively used.

What is my contribution towards the team's deliveries?

I have actively helped the team with writing the final report and cleaning up/commenting the last part of the code. I will also proof-read the final report a few extra times and compare to some other project reports in other courses and some rules language-wise.
